PRODUCT DESCRIPTION

LMV321/LMV358/LMV324 are the most cost-effective amplifiers for low voltage, low power consumption and low-cost applications. The rail-to-rail output and rail-to-rail inputs that exceed power supply range make the LMV321 series easy to use for very low voltage supply applications.

Low I_B feature of these amplifiers allows the parts to be ideal for many sensor applications. 1MHz GBW and 1V/μs slew rate under low power supply voltage can meet almost all sensor requirement.

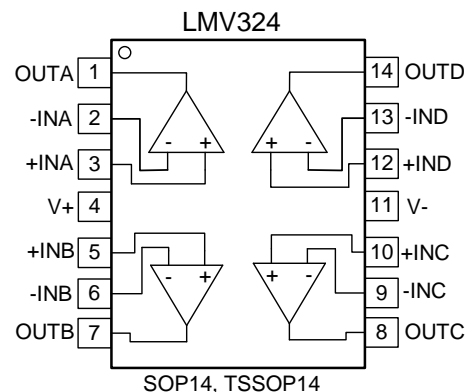

Small Packages:

LMV321 in a SOT-23-5L and SOT-353

LMV358 in a SOP8 and MSOP8

LMV324 in a SOP14 and TSSOP14

(1) Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (Electrostatic Discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjects to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
